

Diaphragm Pressure Gauge for absolute pressures

02.43 DS100-150

The measurement element composed by a concentric waving diaphragm, separates an upper housing called "of reference" which is empty, from a lower housing where the fluid pressure gets in. The upper housing is isolated by a bellows from the atmospheric pressure and it allows to transmit the bending diaphragm movement, under the fluid pressure action, to the pointer through a joint and a linkage. In order to be a suitable support for the diaphragm and to ensure a high instrument resistance to overpressure, the upper part of the reference housing is as rippled as the diaphragm. The instrument case is exposed to the atmospheric pressure therefore it is possible to install optional accessories inside or outside it.

Functional and constructive characteristics

02.43.1

Accuracy : (20-Cor a value of specify temperature in order): 1,6 as per EN 837.

Ambient temperature: -25 / +65 ·C.

Process fluid temperature: (+100 ·C).

Working pressure: max 75% of the full scale value .

Overpressure: max 3,5 bar abs for ranges ≤ 400 m bar abs; max 6 bar abs for ranges 0,6...1,6 bar abs.

Thermal drift: $\pm 0,6\%$ every ± 10 ·C of ambient temperature.

Protection: IP55 as per IEC529.

Process connection: AISI316 st.st.

Elastic element: AISI316 st.st. diaphragm.

Diaphragm gasket: O-Ring in Viton.

Seal bellows: AISI321 st.st.

Case: AISI304 st.st.

Ring: AISI304 st.st. bayonet lock.

Window: glass, 4 mm thick.

Movement: stainless steel with sector stiffened.

Dial: aluminium, white with black markings.

Pointer: aluminium, micrometric adjustable.

Window gasket: EPDM.

Blow out vent: EPDM.

TYPE, DIMENSIONS AND WEIGHTS (threaded connection)

Ranges 0...0,6\0...1,6 bar

Ranges 0...25/0...400 mbar

THREADED CONNECTION: dimensions in mm.

T25	see options table

ACCESSORIES

Adjustable over-load protector: this is useful for installations which may generate high overpressures, the pressure gauges are automatically excluded at the pre-set pressure returns to normal. For further details refer to our datasheet for pressure gauge accessories.

Valves: for construction details and for use limits refer to our datasheet for pressure gauge accessories.

Pigtails and siphons: recommended with temperature of 65° (150° F) or over. For further details refer to our datasheets for pressure gauge accessories.
