

DRUCK & TEMPERATUR Leitenberger GmbH, was founded 1969 in Reutlingen / Germany. We are situated south of Stuttgart, in the regional state of Baden-Wuerttemberg. The company logo dates back to this time, and has never been changed. The Swabians, the people of this region, are well known for their enterprising spirit, and thanks to our employees' innovative ideas, we soon built up a large range of instrumentation for the measurement, calibration and registration of pressure and temperature.

Our medium-sized company has been expanded enormously as a result of development in all our product sectors. Back in 1986, we built and moved into a new manufacturing and office building in Kirchentellinsfurt nearby Reutlingen. This has been extended constantly since then, and added with more buildings, latest in 2012. These headquarters have given us the perfect base from which to provide even more flexible service. They put us in a position to optimise our customer service and to employ leading-edge technologies in close co-operation with our customers, and to make long-term business connections all over the world. As a result, our committed, reliable and skilled team of employees is not only able to manufacture high-quality measuring and calibration technology, they can also offer complete solutions that meet our customers' needs exactly.

We believe in simple and direct communication with our clients so we can offer fast, thorough and reliable solutions for extremely diverse problems and requirements. These direct communication routes allow us to maintain a good price-performance ratio with high quality standards. Levels of customer satisfaction world-wide (our export quota is about 30%) confirm our success all over the globe.

With drive and initiative and loyal customers, DRUCK & TEMPERATUR Leitenberger GmbH has set course for an innovative future.

LR-Cal is a trade mark of [DRUCK & TEMPERATUR Leitenberger GmbH](#) (Germany) for pressure and temperature calibration equipment.

Our company is part of the LEITENBERGER group with plants in Germany (Baden-Wuerttemberg) and Greece. Following companies are also belonging to the group:
