

The multifunctional Temperature Calibrator **LR-Cal LTC 100** is a high-precision, hand-held calibrator for the calibration and troubleshooting of process control instrumentation.

- Measuring of Thermocouples, Resistances, Resistance Temperature Detectors RTD, mA, mV and circuit continuity
- Sourcing of Thermocouples, Resistances, RTDs, mA and mV
- Dual display enables simultaneous input and output view
- Internal 24 V loop supply to power transmitters and measure mA during tests
- Selectable Step- and Ramp functions
- Data logging via supplied SD memory card
- USB interface
- Powered by chargeable Lithium-Ion battery
- Graphically trend display

The Temperature Calibrator **LR-Cal LTC 100** simultaneously measures and sources ten types of thermocouples and seven resistance temperature detectors (RTD), whilst automatically capturing the calibration results. It measures millamps whilst sourcing or simulating millivolts, TCs, RTDs or ohms to calibrate transmitters.

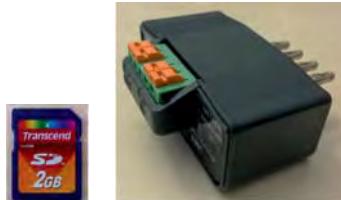

The **LR-Cal LTC 100** logging facility stores data on the SD card supplied, which is easily downloaded to a PC via the onboard USB port and usable in most of the common spreadsheet formats.

The trend feature is ideal for graphing temperature profiles and PID controller optimization with a programmable timebase. In addition, the **LR-Cal LTC 100** has the functionality necessary to install and maintain all powered and non-powered transducers using the built-in 24 V loop power supply.

The multifunctional Temperature Calibrator **LR-Cal LTC 100** is the economical choice for people wanting to do industrial field or workshop calibration.

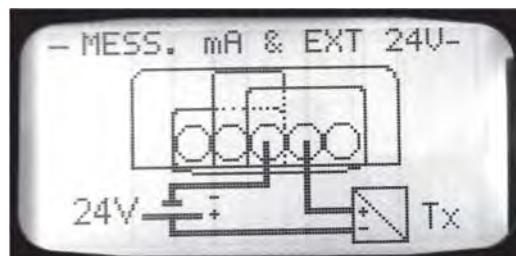

Included in standard delivery is a rubber boot, a SD memory card, a Thermocouple Extender (with cold junction compensation) and a plastic case with foam.

The operation of the Temperature Calibrator **LR-Cal LTC 100** is very simple and easy.

Example: the Help-Menu shows on the display Wiring Schematics for almost all kind of testing and calibration tasks.
